IDEA 2:

FACTS ON OPIOIDS

Opoids are commonly referred to as painkillers and are used to relieve pain. They are also used to treat cough and diarrhea. However, they can be addictive and can lead to overdose and death. It is important to use them responsibly and to seek help if you are struggling with addiction.

OPIODS

- Prescription painkillers
- Heroin
- Fentanyl
- Oxycodone (OxyContin)
- Hydrocodone (Vicodin)
- Codeine
- Morphine
- Naloxone (Narcan)
- Buprenorphine (Suboxone)
- Tramadol (Tramex)
- Oxycodone (Percocet)
- Fentanyl (Duramorph)
- Morphine
- Oxycodone (Percocet)

How are opoids abused?

Opoids can be abused in many ways. Some people take more than prescribed, some inject them, and some use them for a long time. This can lead to addiction and overdose. It is important to use them responsibly and to seek help if you are struggling with addiction.
